DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 03/05/2004 has been entered.
2. Applicants' amendment dated 01/12/2004 has been received and entered. By the amendment, claims 1-16 are now pending in the application.

Reasons for Allowance

3. Claims 1-16 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The references of record neither disclose nor make obvious a reflection-transmission double type liquid crystal display (LCD) device comprising an LCD panel; at least one illuminator disposed on at least one of side surface of the LCD panel and capable of being switched on/off; an optical path changing sheet and a reflection layer disposed on a back side of the optical path changing sheet, wherein:

. the optical path changing sheet has continuous first optical path changing slopes, second optical path changing slopes and flat surfaces, each of said first optical path changing slopes faces said illuminator at an inclination angle in a range of from 30 to 48 degrees with respect to a plane of said optical path changing sheet for reflecting incident light from the illuminator toward said

Art Unit: 2871

visual side of said liquid-crystal display panel, each of said second optical path changing slopes faces away from the illuminator at an inclination angle which is less than 90 degrees with respect to a plane of the optical path changing sheet and is greater than said inclination angle of the first optical path changing slopes, and each of said flat surfaces is inclined at an inclination angle of not larger than 10 degrees with respect to the sheet plane so that a projected area of said flat surfaces on the sheet plane is not smaller than 10 times as large as a projected area of the first optical path changing slopes on the sheet plane as set forth in claim 1.

. the optical path changing sheet includes a repetitive structure of prismatic structures having optical path changing slopes inclined at an inclination angle of from 35 to 46 degrees with respect to the sheet plane, wherein said prism-like concave portions are constituted by discontinuous grooves each of which has a length of not smaller than 5 times as large as a depth of the groove and in which a longitudinal direction of the groove is substantially parallel to the side surface of said liquid crystal display panel on which the illuminator is disposed as set forth in claim 10.

. the optical path changing sheet has continuous first optical path changing slopes, second optical path changing slopes and flat surfaces, each of said first optical path changing slopes faces said illuminator at an inclination angle in a range of from 30 to 48 degrees with respect to a plane of said optical path changing sheet for reflecting incident light from the illuminator toward said visual side of said liquid-crystal display panel, each of said second optical path changing slopes faces away from the illuminator at an inclination angle of not larger than 10 degrees with respect to the sheet plane so that a projected area of the second optical path changing slopes on the sheet

Art Unit: 2871

plan is not smaller than 10 times as large as a projected area of the first optical path changing slopes on the sheet plane as set forth in claim 15.

. the optical path changing sheet has a plurality of optical path changing means having a concave shape formed by first and second optical path changing slopes and flat surfaces interposed between the first and second optical path changing slopes, each of said first optical path changing slopes faces said illuminator at an inclination angle in a range of from 30 to 48 degrees with respect to a plane of the optical path changing sheet for reflecting incident light from the illuminator toward said visual side of said liquid-crystal display panel, each of said second optical path changing slopes faces away from the illuminator, and each of the flat surfaces is inclined at an inclination angle of not larger than 10 degrees with respect to the sheet plane as set forth in claim 16.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
